SUMMARY

AI Developer with hands-on experience building and deploying LLM automation pipelines, deep learning systems, and multi-modal AI platforms across enterprise reporting, medical imaging, and AI security. Currently interning as an AI Developer, fine-tuning and deploying local LLMs (Ollama, Hugging Face, LoRA) for production use. Skilled across the full AI/ML lifecycle — data preprocessing, model training, evaluation, and deployment — with a focus on measurable, production-ready solutions.

TECHNICAL SKILLS

Languages: Python, SQL, TypeScript, Bash

Generative AI / LLM: Ollama, Llm, RAG pipelines, Hugging Face Transformers, LoRA fine-tuning, Prompt Engineering, FAISS

APIs & Backend: FastAPI, REST APIs, Streamlit

ML Frameworks: PyTorch, scikit-learn, torchvision, NumPy, Pandas

MLOps: Docker, Weights & Biases, GitHub

Computer Vision: OpenCV, MediaPipe, Grad-CAM, rPPG, deepfake detection

Databases: PostgreSQL

Data Analytics: Tableau, Power BI, Matplotlib, Seaborn, Jupyter Notebook, EDA

PROFESSIONAL EXPERIENCE

AI Developer — GreenPoint Global Jun 2026 – Present

- Built an automation pipeline using Ollama (local LLM), Fine-tuned open-source LLMs with Hugging Face + LoRA, Integrated the pipeline

PROJECT EXPERIENCE

HumanEye — Multi-Modal AI Fraud Detection Platform | PyTorch · FastAPI · ONNX · PostgreSQL · Neo4j · Docker

2024 – Present [GitHub](#)

- Built a 5-domain fraud detection system (behavioral biometrics, liveness/deepfake, voice forensics, NLP, financial fraud) via FastAPI; PyTorch models exported to ONNX with keystroke/mouse time-series features engineered using NumPy/Pandas
- Developed a liveness + deepfake detector (~95% accuracy) using MediaPipe 468-point face mesh, rPPG, and skin-texture analysis; built voice forensics (Librosa) to flag AI-generated speech via jitter, shimmer, and prosodic features, and an NLP classifier to detect LLM-generated text via vocabulary and sentence-rhythm patterns
- Added a Neo4j graph layer to catch coordinated fraud rings; stored behavioral data in TimescaleDB; fully containerized with Docker and CI/CD via GitHub Actions

CXR-Detect — Chest X-Ray Pneumonia Classifier | PyTorch · torchvision · scikit-learn · Streamlit

2024 [Live Demo](#) | [GitHub](#)

- Fine-tuned ResNet50 on 5,800+ chest X-rays; fixed 3:1 class imbalance via WeightedRandomSampler — 98.5% AUC, 96% accuracy, 98.2% Recall, 96.9% F1 on 624 test images
- Halved training time with PyTorch AMP, cosine annealing LR, and early stopping; 5-pass TTA + Brier-score calibration reduced misclassifications to just 24/624
- Grad-CAM heatmaps highlight lung regions driving each prediction; deployed as a Streamlit app with an optimized clinical decision threshold

EDUCATION

Vishwaniketan Institute of Management Entrepreneurship and Engineering Technology (VIMEET) — Kumbhivali, Maharashtra

Bachelor of Engineering (B.E.) in Computer Science — AI/ML, with Honours in Data Science | Overall CGPA: 8.4 | 2022 – 2026

ACHIEVEMENTS

- Ranked 1st in Honours (Data Science) specialization, with a CGPA of 9.2
- Secured a Top-3 rank in both core academics and Data Science Honours in 2nd year and again in 3rd year

PUBLICATIONS

- "Application for Direct Market Access for Farmer" — accepted for publication, JETIR (International Journal)
